

README

AI-Suplex 7-7-7 Edition

Version: 2.0

Author: Kudakwashe Magwenzi (Zimbabwe AI Solutions)

License: Paid – one user per purchase. Resale prohibited.

What Is AI-Suplex 7-7-7?

AI-Suplex 7-7-7 is a **self-improving execution OS** built on Obsidian. It includes a **3-layer memory stack** that learns from every session, a **3lm CLI** for managing the self-improving loop, and everything in the **Core Edition** (free).

- **✓ 3-Layer Memory Stack** — Episodic, Semantic, and Procedural memory that compounds across every session. Your system gets smarter automatically.
- **✓ 3lm CLI** — 7 vault commands that manage the memory loop: `end`, `learn`, `promote`, `revise`, `index`, `start`, `status`.
- **✓ Focus Manager** — Define your own focus areas (e.g., "Client Work", "AI Engineering", "Fitness").
- **✓ Cycle/Week tracking** — Organise your work into 7-week cycles (the 7-7-7 rhythm).
- **✓ MOC & Tracker generation** — Auto-create a Map of Content and a progress tracker for each focus area.
- **✓ Nested folders** — Artifacts, B-Bombs, Insights, and Episodic memory auto-organised by `Cycle X/Week Y`.
- **✓ Archive scripts** — Move old sessions to archive with one click (single or bulk).
- **✓ Enhance script** — Inject recent activity into MOCs and Trackers (keeps dashboards fresh).
- **✓ 10 AI Skills** — Teach Claude, ChatGPT, or DeepSeek to act as an Orchestrator, Architect, or Builder.
- **✓ 10 Prompt Patterns** — Copy-paste templates with built-in MEMORY LOOP routing (works without Obsidian).
- **✓ Full Command Center** — Dashboard with focus health, cycle/week context, memory health, and next actions.
- **✓ 22 Macros** — One-click capture for sessions, artifacts, B-Bombs, insights, reviews, and folder management.
- **✓ AGENTS.md** — Full 5-role definitions + 3-Layer Memory Stack + 3lm CLI reference.

North Star: "Each new session starts smarter than the last."

If you outgrew Core Edition, this is your next step.

Plugins pre-configured

Requirements

- **Obsidian** (latest version) – [Download](#)
 - **Plugins** (auto-installed when you open the vault – just click "Trust author"):
 - Dataview, QuickAdd, Templater, Commander, Tasks
 - (Optional) Copilot, Text Generator for AI assistance
-

Installation (5 minutes)

Step 1 – Unzip into your vault

- Unzip `AI-Suplex-777.zip` into your Obsidian vault folder.
- You should see an `AI-Suplex-777/` folder inside your vault.

Step 2 – Open the vault

- Open Obsidian → Open folder as vault → select the folder containing `AI-Suplex-777/`.
- When prompted, click **"Trust author and enable plugins"** – this automatically installs and enables all required plugins.

Step 3 – (Optional) Rename the folder

- You can rename `AI-Suplex-777` to anything you like (e.g., `MyWork`). However, you must then update the root path in all scripts and queries.
Advanced users only. For most users, keep the default name.

Step 4 – Run the Focus Manager

- Open Command Palette (`Ctrl/Cmd+P`) → run `Focus Manager`.
- The default focuses (ai-engineering, freelance, wqr, digital-products, content-creation) are already set. You can add, edit, or delete them as you like.
- Close the manager when done.

Step 5 – Generate MOCs and Trackers

- Run `Sweeper – Create MOC` (via Command Palette or Commander button). This creates a Map of Content for each focus in `MOCs/`.
- Run `Sweeper – Create Tracker` – enter the current cycle number (e.g., `1`). This creates a progress tracker for each focus in `Trackers/`.

Step 6 – Test a session

- Click the  **Start** button (or run `Session Start` macro).
- Fill in the mission, tasks, success metrics, energy level, cycle, week, and focus.
- Work, capture an artifact ( `Artifact`), and an insight ( `Insight`).

- Click  **End** to close the session.
 - Run the memory loop — see Quick Start Step 6 below.
 - Open `Command Center.md` — you'll see your session appear.
-

Quick Start Guide (7-7-7 Edition)

0. Start with Prompt Patterns (30 seconds, no Obsidian needed)

- Open `Prompt Patterns/` folder
- Copy any pattern → paste into Claude/ChatGPT/DeepSeek
- Replace `Source` section → execute → get structured output instantly

1. Define your focus areas

- Run `Focus Manager` → add/delete focuses. This creates `Focuses.md`.

2. Generate MOCs and Trackers

- `Sweeper – Create MOC` – builds a dashboard per focus.
- `Sweeper – Create Tracker` – builds a progress table per focus.

3. Start a session

- `Session Start` → choose focus, cycle, week, mission, tasks, metrics, energy.
- A file is created in `Sessions/Active/Start/`.

4. Work & capture

- Use `Artifact` to save work-in-progress (auto-saved in `Artifacts/Cycle X/Week Y/`).
- Use `Insight` to log learnings (appended to `Insights/Cycle X/Week Y.md`).

5. End the session

- `Session End` → rating, status, insights, next actions.
- Report saved in `Sessions/Active/End/`.

6. Run the memory loop (after every session)

```
node scripts/3lm/3lm.js end      # Write episode to episodic memory
node scripts/3lm/3lm.js learn    # Extract lessons from the episode
node scripts/3lm/3lm.js index    # Refresh the memory lookup manifest
```

7. Promote to B-Bomb

- When an artifact is polished, run `B-Bomb` → fill title, description, content, product potential.
- Saved in `B-Bombs/Cycle X/Week Y/`.

8. Weekly review (Saturday)

- Run `Sweeper – Enhance MOCs & Trackers` to inject recent data into your dashboards.
- Run `3lm promote --min 70` and `3lm revise` — score lessons, promote winners, check contradictions.
- Run `Sweeper – Weekly Review` to generate a structured weekly review file.
- Use the `Orchestrator – Weekly Review AI skill` (in `Skills/`) for deeper strategic analysis.

9. Cycle review (end of 7 weeks)

- Run `Sweeper – Generate Cycle Review` to produce a comprehensive cycle-end analysis.
- Run `3lm promote --min 70` — promote all remaining high-scoring lessons.
- Run `3lm index` — final memory refresh before the next cycle.

10. Archive old sessions

- Use `Sweeper – Archive Session` (single) or `Sweeper – Archive All Active Sessions` (bulk) to move completed sessions to `Archive/`.

The 3-Layer Memory Stack

The defining feature of AI-Suplex 7-7-7. Your vault has a file-first, markdown-first memory stack that compounds knowledge across sessions:

SEMANTIC
PROCEDURAL

- ← "What is true" – stable rules, preferences
- ← "How to do it" – winning workflows

The self-improving loop:

```
# After every session
3lm end      # Write the episode
3lm learn    # Extract lessons
3lm index    # Refresh the lookup

# Every week (Saturday)
3lm promote --min 70 # Score + promote stable lessons
3lm revise    # Check for contradictions
```

Read [AI-Suplex Kick-start/🧠 AI-Suplex 3-Layer Memory System.md](#) for the full spec.

Prompt Patterns — The Fastest Way to Start

Prompt Patterns are copy-paste templates you use directly with any AI (Claude, ChatGPT, DeepSeek). No Obsidian required.

Each pattern is a self-contained `<prompt-pattern>` block. You copy it, paste it into your AI chat, replace the `Source` section with your content, and execute. The AI generates structured output in seconds.

Available Patterns (10 included)

Pattern	What It Does	When to Use
Tasklist Generation	Converts raw to-dos into structured tasklists with roles, durations, and priorities	Starting a new project or week
Session Start Prompt	Generates a complete session brief with mission, tasks, and success metrics	Beginning a focused work block
Session End Prompt	Creates a blank end prompt (YAML + questions)	Before closing a session
Session End Report	Creates a formatted session report from raw data	After completing a work session
Artifact Capture	Saves work-in-progress with full metadata	During session — capturing output

Pattern	What It Does	When to Use
B-Bomb Promotion	Promotes polished artifacts to production-ready B-Bombs	When an artifact is ready for reuse
Batch Insight Generation	Extracts learnings from session data into structured insights	After a heavy research session
Cycle Plan Generation	Produces a 7-week strategic plan from high-level goals	Start of a new cycle
Cycle Review Generation	Analyzes 7 weeks of data and recommends next-cycle strategy	End of a cycle
Weekly Review Generation	Generates structured weekly review with recommendations	Saturday ritual

How to Use

1. Open Prompt Patterns/ folder
2. Copy the pattern file (e.g., " Pattern - Tasklist Generation.md")
3. Paste the entire <prompt-pattern> block into your AI chat
4. Replace the Source section with your content
5. Execute – AI generates formatted output

Tip: Each pattern now includes built-in **MEMORY LOOP routing** — the AI automatically extracts what was learned and classifies it for the 3-layer memory stack.

Using AI Skills (11 included)

Skills are markdown files in Skills/. Each one teaches an AI (Claude, ChatGPT, DeepSeek) to act as an AI-Suplex assistant.

Example:

1. Open Skills/Orchestrator – AI-Suplex Tasklist Generator.md .
2. Refer to skill in AI chat with: *"Act as an AI-Suplex Orchestrator: Generate an AI-Suplex Tasklist"*
3. Give your raw to-do list.
4. The AI returns a structured tasklist (with roles, durations, nature of work).

Other skills:

- Architect – Session Start Prompt Generator — turn a task ID into a session start prompt.
- Architect – Session End Report Generator — create a report from a filled end prompt.

- `Orchestrator – Weekly Review` — analyse your week and suggest improvements.
- `Orchestrator – Cycle Review` — analyse your full 7-week cycle.

See `Skills/` for all 11.

Folder Structure Explained (7-7-7)

Folder	Purpose
<code>Sessions/Active/Start/</code>	Session start files (mission, tasks, energy, cycle, week, focus)
<code>Sessions/Active/End/</code>	Session end reports (rating, insights, next actions)
<code>Prompt Patterns/</code>	10 copy-paste templates with MEMORY LOOP routing (no Obsidian needed)
<code>Artifacts/Cycle X/Week Y/</code>	Work-in-progress assets, organised by cycle/week
<code>B-Bombs/Cycle X/Week Y/</code>	Polished, reusable assets, organised by cycle/week
<code>Insights/Cycle X/Week Y.md</code>	Weekly insight log
<code>memory/</code>	3-Layer Memory Stack — episodic, semantic, procedural, lessons
<code>memory/episodic/Cycle-X/Week-Y/</code>	Session episodes — "What happened"
<code>memory/semantic/</code>	Stable facts, rules, preferences
<code>memory/procedural/</code>	Reusable workflows, macros, prompt patterns
<code>memory/lessons.md</code>	Candidate learnings (staging area before promotion)
<code>scripts/3lm/</code>	3lm CLI — 7 vault operations commands for the memory loop
<code>MOCs/</code>	Maps of Content (one per focus) – auto-generated
<code>Trackers/</code>	Progress trackers (one per focus) – auto-generated
<code>Tasklists/</code>	AI-Suplex and combined tasklists
<code>Reviews/Weekly/</code>	Weekly review files (generated by AI skill)
<code>Plans/</code>	Phase execution plans
<code>QualityNotes/</code>	Long AI review notes
<code>AI-Suplex Kick-start/</code>	Methodology docs, Architecture Spec, 3-Layer Memory System, Persona

Boot Sequence — Context Kick-start

The AI-Suplex Kick-start/Context Kick-start/ folder is the **boot context** for AI agents.

Every time an agent reads AGENTS.md , the Startup Protocol loads this folder first — your AI knows who you are, what you're working on, and your current state.

Folder Structure

```
AI-Suplex Kick-start/Context Kick-start/
├── Profile.md           ← Who you are (name, role, skills, goals) – STABLE
├── Active/              ← Current session context – UPDATE OFTEN
│   └── 2026-XX-XX-context-kick-start.md
└── Archived/           ← Past context – moved here when outdated
```

What to Place Here

File	Purpose	Update Frequency
Profile.md	Your name, role, skills, tech stack, battle cry	Once (stable)
Active/current-context.md	Last session summary, current goals, blockers, wins	Each session
Archived/	Old context files you no longer need	When Active gets full

Example — Profile.md

```
---
type: profile
status: active
---

# 🦾 Your Profile

- **Name:** [Your name]
- **Role:** Product Engineer | Full-Stack Developer
- **Skills:** Angular, Java Spring, AI Agents, Paynow
- **Current Goals:** Launch product, land 3 clients
```

Example — Active Context

```
# Context Kick-start – [Date]

**Last session:** Completed WQR payment MVP ✅
**This week:** Fix Oracle block, test Paynow webhook
```

****Blockers:**** Oracle credentials expired
****Next action:**** Call support at 10:00

🔗 AI agents load this automatically. The Startup Protocol in `AGENTS.md` reads Context Kick-start/ after `Profile.md`. Keep `Profile.md` stable; update `Active/` each session.

🔧 Commander Buttons (Already Configured)

When you open the vault, **23 pre-configured Commander buttons** appear in the page header toolbar plus 4 daily-use buttons on the left ribbon. All macros are also accessible via Command Palette (`Ctrl/Cmd+P`).

🚀 Session (Ribbon)

Button	Macro	What it does
🚀 Start	Session Start	Begin a session — choose focus, cycle, week, mission
🏁 End	Session End	End a session — rating, insights, next actions

📦 Capture (Ribbon)

Button	Macro	What it does
📄 Artifact	Artifacts	Save work-in-progress with full metadata
💣 B-Bomb	B-Bombs	Promote polished assets to reusable B-Bombs
💡 Insight	Insight	Log a quick insight (appends to weekly file)

🎯 Focus (Toolbar)

Button	Macro	What it does
🎯 Focus Manager	Focus Manager	Add, edit, or delete focus areas

📁 Structure (Toolbar)

Button	Macro	What it does
🌐 Create MOC	Sweeper – Create MOC	Generate Map of Content per focus

Button	Macro	What it does
 Create Tracker	Sweeper – Create Tracker	Generate progress tracker per focus
 Ensure Folder Structure	Sweeper – Ensure Folder Structure	Create full vault folder hierarchy
 Ensure (Cycle)	Sweeper – Ensure Folder Structure (Current Cycle)	Create folders for all 7 weeks in a cycle

Archive (Toolbar)

Button	Macro	What it does
 Archive Session	Sweeper – Archive Session	Move a session to Archive
 Archive All	Sweeper – Archive All Active Sessions	Bulk archive all active sessions

Data (Toolbar)

Button	Macro	What it does
 Enhance MOCs/Trackers	Sweeper – Enhance MOCs & Trackers	Inject recent data into dashboards
 Aggregate Weekly	Sweeper – Aggregate Weekly Data	Generate a single source file for AI weekly reviews
 Extract Next Steps	Sweeper – Extract Next Steps	Collect next_actions from all files into weekly files

Cycle (Toolbar)

Button	Macro	What it does
 Generate Review	Sweeper – Generate Cycle Review	Produce comprehensive cycle-end analysis
 Start New Cycle	Sweeper – Start New Cycle	Kick off a new 7-week cycle with inherited structure
 Refresh B-Bomb Index	Sweeper – Refresh B-Bomb Index	Update B-Bomb index file
 Weekly Review	Sweeper – Weekly Review	Generate structured weekly review file

Tip: You can rearrange, hide, or add more buttons in Commander settings.

? Troubleshooting

Problem	Solution
Prompt Patterns not working	Copy the entire <code><prompt-pattern></code> block — the <code>yaml</code> fence is part of the pattern. Don't edit it.
Focus Manager not showing focuses	Run <code>Focus Manager</code> first — it creates <code>Focuses.md</code> with defaults.
MOCs/Trackers empty	Run <code>Sweeper – Create MOC</code> and <code>Sweeper – Create Tracker</code> after defining focuses.
Macros error about <code>Deep Ultra OS/</code>	You renamed the root folder. Either keep <code>AI-Suplex-777</code> or edit all scripts (advanced).
Dataview queries show nothing	You need to run at least one session. Queries filter by date; give it time.
3lm CLI not working	Run from inside the <code>AI-Suplex-777/</code> directory — try <code>node scripts/3lm/3lm.js status</code> first.
AI skills not working	They are markdown files — you must copy-paste the content to an AI chat. They don't run inside Obsidian.

Upgrading from Core Edition

If you already use Core Edition, you can upgrade without losing data:

1. **Backup your vault** (just in case).
2. **Copy** your existing `Sessions/`, `Artifacts/`, `B-Bombs/`, `Insights.md` from Core into the 7-7-7 vault.
3. **Run Focus Manager** to define focuses (or keep defaults).
4. **Run Sweeper – Create MOC** and **Sweeper – Create Tracker**.
5. **Test** a new session. Old sessions will appear in Command Center (flat structure is fine).
6. **Run `3lm index`** to refresh the memory lookup with your imported data.

Your old files remain readable. The 7-7-7 edition adds nested folders and the memory stack for new work.

License

- **7-7-7 Edition:** Paid license – one user per purchase. You may not resell, redistribute, or claim the product as your own.

- **Core Edition:** Free (separate download). Upgrading requires purchasing 7-7-7.

See `LICENSE.txt` in the zip for full terms.

Support

- **Documentation:** AI-Suplex Kick-start/ folder contains methodology guides, Architecture Spec, and the 3-Layer Memory System spec.
 - **Community:** Join the free AI-Suplex Discord: <https://discord.gg/hXp8qhFXQV>
 - **Email:** kmagwenzi@gmail.com
-

TWABAM ⚡!

You now have the complete AI-Suplex 7-7-7 — the self-improving execution OS. Start your first session. Run the memory loop. Watch your system get smarter.

– Kudakwashe Magwenzi, Zimbabwe AI Solutions
