

WELCOME

Welcome to AI-Suplex 7-7-7

TWABAM ⚡! Three ways to use this system. Pick your path.

Folder Structure

When you unzip the package, you'll see:

```
7-7-7 Edition/          ← Open this folder in Obsidian (contains
  .obsidian/)
└─ AI-Suplex-777/      ← Open this folder with an AI Agent (contains
  AGENTS.md)
```

- **For Obsidian:** Open `7-7-7 Edition/` — this folder has the `.obsidian/` config and plugin settings
- **For AI Agents:** Point your agent at `7-7-7 Edition/AI-Suplex-777/` — this folder has `AGENTS.md` with full role definitions

Pattern-Only

No Obsidian. No software. Just copy-paste into AI chat.

- Copy any file from `Prompt Patterns/` → paste into Claude, ChatGPT, or DeepSeek
- Replace the `Source` section with your content → execute
- AI generates structured tasklists, session prompts, artifacts, and reports

→ See: 🦾 AI-Suplex Simple Workflow Guide – Pattern Edition.pdf

🟪 Obsidian Vault

Full macro-powered workflow. Install in 2 minutes.

- Unzip → open `7-7-7 Edition/` folder in Obsidian → trust 7 plugins
- Click 🚀 **Start** in the left ribbon → choose focus, cycle, week, mission
- Capture artifacts 💣 B-Bombs 💡 Insights with one-click buttons

→ See: 🦾 AI-Suplex Simple Workflow Guide – Obsidian Macros Edition.pdf or 📖 README.pdf

🔴 Full AI Stack

Obsidian + Coding Agent + Self-Improving Memory

- Follow Obsidian path above for the vault
- Point your AI agent at `7-7-7 Edition/AI-Suplex-777/` — reads AGENTS.md automatically
- The **3-Layer Memory** stack captures episodes, extracts lessons, and promotes winning patterns
- After every session: `node scripts/3lm/3lm.js end` → `learn` → `index`
- Your AI remembers past decisions, discoveries, and context across sessions

→ See: 🧠 AI-Suplex 3-Layer Memory Stack.pdf

→ See: AGENTS.md — Startup Protocol loads context from AI-Suplex Kick-start/Context Kick-start/

Start anywhere. Upgrade anytime. 🦾 ⚡

🔗 🧠 **Boot Sequence — Context Kick-start**

The `AI-Suplex Kick-start/Context Kick-start/` folder is read during the AI agent boot sequence.

Place files here that your AI should know at startup:

- **Profile.md** — Who you are, your role, skills, goals
- **Active/** — Current session summary, recent wins, blockers
- **Archived/** — Past context (moved here when no longer relevant)

Every time an agent reads `AGENTS.md`, it loads this folder for live context.

Keep Profile.md stable. Update Active/ after each major session.

🌟 North Star

"Each new session starts smarter than the last."
