

AI-Suplex Simple Workflow Guide — Prompt Patterns Edition

AI-Suplex Simple Workflow — Pattern Edition

TWABAM ⚡ This is the **AI Chat / AI Agent Assisted workflow** — follow using only Prompt Patterns. Copy-paste into any AI chat. No Obsidian macros needed.

For local coding agents (Claude Code, Open Code): Make sure to `cd` into the inner folder first:

```
cd "7-7-7 Edition/AI-Suplex-777"
```

The agent reads `AGENTS.md` and accesses `Skills/`, `Prompt Patterns/`, and the memory layer from here.

For cloud AI chats (ChatGPT, DeepSeek): Just copy the pattern blocks below — no folder setup needed.

Step 1: Add Your Focus Areas

Open `Focuses.md` in any text editor. Add your focus areas:

```
focuses:
- name: my-focus
  display: My Focus
  description: "What I'm working on"
```

Step 2: Generate a Tasklist

1. Open `Prompt Patterns/`  `Pattern - Tasklist Generation.md`
2. Copy the entire `<prompt-pattern>` block
3. Paste into Claude, ChatGPT, or DeepSeek
4. Replace the Source section with your to-do list
5. Execute — the AI generates a structured tasklist with task IDs

Step 3: Start a Session

1. Open Prompt Patterns/ Pattern - Session Start Prompt Generation.md
2. Copy the `<prompt-pattern>` block → paste into AI chat
3. Complete Source /- Raw Source: with the Execution Command (Bottom of AI-Suplex Tasklist) and Source/ - File Reference: with the file path to AI-Suplex Tasklist
4. Execute — get a ready-to-use session start prompt with mission, tasks, and metrics

Step 4: Work & Capture

During your session, capture everything using patterns:

What	Pattern	When
 Artifact	 Pattern - Artifact Capture.md	Saving work-in-progress
 Insights	 Pattern - Batch Insight Generation.md	Logging learnings
 B-Bomb	 Pattern - B-Bomb Promotion.md	Promoting polished work

Step 5: End the Session

1. Open Prompt Patterns/ Pattern - Session End Prompt Generation.md and paste into AI chat and execute - *You get a blank Session Start Prompt*
2. Fill in Session End Prompt data and paste into: AI-Suplex-777/prompt.md
3. Open Prompt Patterns/ Pattern - Session End Report paste into AI chat
4. In `CONTENT` section make Source/- File Reference refer to: AI-Suplex-777/prompt.md
5. Execute and get full session report

Step 6: Feed the Memory Layer

After your session report is generated, run these commands from inside AI-Suplex-777/ :

```
# Save the session to episodic memory
node scripts/3lm/3lm.js end

# Extract lessons from the session
node scripts/3lm/3lm.js learn
```

```
# Refresh the memory index
node scripts/3lm/3lm.js index
```

What this does:

- Writes a compressed episode record to `memory/episodic/Cycle-X/Week-Y/`
- Extracts what you learned and saves it to `memory/lessons.md`
- Refreshes the lookup manifest so your next session loads the right context

Weekly: Run `node scripts/3lm/3lm.js promote --min 70` to score lessons and promote stable ones into semantic or procedural memory. Run `node scripts/3lm/3lm.js revise` to check for contradictions.

→ See: 🧠 [AI-Suplex 3-Layer Memory Stack.md](#) for the full guide

Step 7: Plan Your Week

1. Open `Prompt Patterns/📄 Pattern - Weekly Plan Generation.md`
 2. Copy → paste → replace Source with pending tasks and priorities
 3. Execute — get a daily breakdown with focus allocation and energy management
-

Step 8: Review Your Week

1. Open `Prompt Patterns/📄 Pattern - Weekly Review Generation.md`
 2. Copy → paste → replace Source with your week's data
 3. Execute — the AI analyses your week and suggests improvements
-

Full Pattern Chain

```
Tasklist → Session Start → Artifact/B-Bomb/Insight → Session End → Memory
Layer → Weekly Plan → Weekly Review
```

Every step is a copy-paste pattern. The memory layer runs via `3lm` CLI after each session. No Obsidian required. No macros. Just AI chat + terminal.

What's Next?

- **Cycle Plan:** 📄 `Pattern - Cycle Plan Generation.md` — 7-week strategic roadmap

- **Cycle Review:**  [Pattern - Cycle Review Generation.md](#) — end-of-cycle analysis
 - **Memory Stack:**  [AI-Suplex 3-Layer Memory Stack.md](#) — full memory layer guide
 - **Full Guides:** See [AI-Suplex-777/Guides/](#)  [AI-Suplex Full Workflow Guide](#) and [AI-Suplex-777/AI-Suplex Kick-start/The AI-Suplex Workflow Pipeline](#) for the macro-powered version
-

You're now running AI-Suplex with prompt patterns and a self-improving memory layer.
